

## Mark Scheme (Results)

Summer 2018

Pearson Edexcel GCSE Chemistry (1CH0\_1H) Paper 1H

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <a href="https://www.edexcel.com">www.btec.co.uk</a>. Alternatively, you can get in touch with us using the details on our contact us page at <a href="https://www.edexcel.com/contactus">www.edexcel.com/contactus</a>.

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Mark schemes have been developed so that the rubrics of each mark scheme reflects the characteristics of the skills within the AO being targeted and the requirements of the command word. So for example the command word 'Explain' requires an identification of a point and then reasoning/justification of the point.

Explain questions can be asked across all AOs. The distinction comes whether the identification is via a judgment made to reach a conclusion, or, making a point through application of knowledge to reason/justify the point made through application of understanding. It is the combination and linkage of the marking points that is needed to gain full marks.

When marking questions with a 'describe' or 'explain' command word, the detailed marking guidance below should be consulted to ensure consistency of marking.

Assessment Objective		Command Word		
Strand	Element	Describe	Explain	
AO1*		An answer that combines the marking points to provide a logical description	An explanation that links identification of a point with reasoning/justification(s) as required	
AO2		An answer that combines the marking points to provide a logical description, showing application of knowledge and understanding	An explanation that links identification of a point (by applying knowledge) with reasoning/justification (application of understanding)	
AO3	1a and 1b	An answer that combines points of interpretation/evaluation to provide a logical description		
AO3	2a and 2b		An explanation that combines identification via a judgment to reach a conclusion via justification/reasoning	
AO3	3a	An answer that combines the marking points to provide a logical description of the plan/method/experiment		
AO3	3b		An explanation that combines identifying an improvement of the experimental procedure with a linked justification/reasoning	

<sup>\*</sup>there will be situations where an AO1 question will include elements of recall of knowledge directly from the specification (up to a maximum of 15%). These will be identified by an asterisk in the mark scheme.

Question Number	Answer	Mark
1(a)	C yes high coloured	(1)
	The only correct answer is C	AO 1 1
	A is not correct because transition metal chlorides are coloured  B is not correct because all properties are incorrect	
	<b>D</b> is not correct because transition metals are used as catalysts and have a high density	

Question Number	Answer	Mark
1(b)	An explanation linking	(2)
	<ul> <li>{ air/oxygen} excluded / { water/moisture} excluded / oil acts as a barrier (1)</li> </ul>	AO 1 1
	• { air/oxygen} and { water/moisture/damp conditions} both needed (for iron to rust / corrosion) (1)	

Question Number	Answer	Additional guidance	Mark
1 ( c)	An explanation linking		(2)
	zinc corrodes { easier than / in preference to / OWTTE} iron / zinc reacts with air and water instead (1)	reject zinc rusts	AO 1 1 AO 2 1
	zinc is more reactive than iron / zinc is sacrificial / zinc has a higher tendency to form ions (1)		

Question Number	Answer	Additional guidance	Mark
1(d)	An explanation linking two of the following points		(2) AO 1 1
	{ metal ions / cations}     surrounded by (delocalised)     electrons (1)	ignore metal nuclei	
	<ul> <li>strong { forces of attraction / bonding} (between (delocalised) electrons and { metal ions / cations} ) (1)</li> </ul>	allow electrostatic bonds / metallic bonds	
	<ul> <li>needs lots of energy to { separate the particles / break bonds / break forces of attraction} (1)</li> </ul>	ignore separating electrons  any mention of intermolecular forces / covalent bonding / molecules / ionic bonding / atoms – max 1 mark	

Total for question 1 = 7 marks

Question Number	Answer	Additional guidance	Mark
2(a)(i)	A description including		(2)
	<ul> <li>apply lighted splint (1)</li> </ul>	allow flame / ignite gas / fire	AO 2 2
	• (squeaky) pop (1)	ignore 'squeaky pop test' / glowing splint	
		second mark is dependent on first	

Question Number	Answer		Mark
2(a)(ii)	An explanation linking		(2)
	• loss of electron(s) (1)	allow gains two electrons for 1 mark	AO 1 1
	• two electrons (1)	zero marks overall if sharing of electrons / gain or loss of protons / positive electrons	
		marks can be awarded for suitably drawn diagram / half equation	

Question Number	Answer	Additional guidance	Mark
2(b)	final answer of 94 (g dm <sup>-3</sup> ) with or without working (2)	allow ECF (error carried forward) throughout	(2)
	OR 23.5 (1) (= 0.094) 250 0.094 x 1000 (1)	other final answers: 0.094 / 9.4 (1) 0.000094 or 9.4 x 10 <sup>-5</sup> (1)	AO 2 1
	OR $\frac{250}{1000}$ (dm <sup>3</sup> ) (1) (= 0.25 (dm <sup>3</sup> ))	0.25 (dm³) (1)	
	23.5 (1) 0.25		
	OR $\frac{1000}{250}(1) = 4$		
	4 x 23.5 (1)	allow <u>250</u> x 1000 or 10638(.3) (1) 23.5	

Question Number	Answer	Additional guidance	Mark
2(c)	A description to include	if filtration not first stage, ignore it and give maximum 2 marks	(3) AO 2 2
	• filter (1) and two in a logical order from	allow description of filtration ignore filtration to obtain nickel sulfate (crystals)	
	• crystallisation (1)		
	<ul> <li>heat solution (to concentrate) (1)</li> <li>allow to cool (1)</li> </ul>	allow 'leave until water evaporates' / use of water bath / evaporate { water/the solution}  allow leave { until crystals form	
	dry crystals between filter papers (1)	/ for a few hours / in a warm place / on a window sill}	
		allow 'dry crystals in (warm) oven'	
		if alternative methods of making nickel sulfate solution described, max 1 mark from last four marking points	

Total for question 2 = 9 marks

Question Number	Answer	Mark
3(a)(i)	C iron oxide is reduced	(1)
	The only correct answer is C	AO 1 1
	A is not correct because carbon gains oxygen	
	<b>B</b> is not correct because it is not an acid-base reaction	
	<b>D</b> is not correct because iron oxide loses oxygen	

Question Number	Answer	Additional guidance	Mark
3(a)(ii)	final answer of 168 (tonnes) with or without working (3)	allow ECF throughout	(3)
	OR	$M_r$ [Fe <sub>2</sub> O <sub>3</sub> ] = 160 seen without working (1)	AO 2 1
	relative formula mass $Fe_2O_3 = 2x56 + 3x16 (= 160) (1)$	allow 320 tonnes : 224 tonnes (1)	
	160 tonnes Fe <sub>2</sub> O <sub>3</sub> produces { 2x56 / 112} tonnes Fe (1)	final answer 84 (tonnes) with or without working (2)	
	240 tonnes Fe <sub>2</sub> O <sub>3</sub> produces 2x56 x 240 (1) = 168 (tonnes) 160	William Working (2)	
	OR relative formula mass Fe <sub>2</sub> O <sub>3</sub> = 2x56 + 3x16 (= 160) (1)	Note: final answer 1.5 scores 2 overall	
	$\frac{240}{160}$ (1) = 1.5 1.5 x 112 (1) = 168 (tonnes)		
	OR relative formula mass Fe <sub>2</sub> O <sub>3</sub> = 2x56 + 3x16 (= 160) (1)		
	$ \frac{112}{160}(1) = 0.7 $ 0.7 x 240 (1) = 168 (tonnes)		

Question Number	Answer	Additional guidance	Mark
3(b)	An explanation linking the following points		(2)
	aluminium is high in reactivity / aluminium oxide is (very) stable (1)	allow carbon is less reactive than aluminium / ORA / aluminium is very reactive ignore 'aluminium is more reactive' (alone)	AO 1 1
	aluminium (oxide) cannot be reduced by carbon (1)	allow carbon cannot displace aluminium / aluminium oxide does not react with carbon ignore aluminium extracted by electrolysis	

Question Number	Answer	Mark
3(c)	electrolysis	(1) AO 3
		2a

Question Number	Answer	Additional guidance	Mark
3(d)	<ul> <li>A description to include</li> <li>plants absorb         { copper/metal} (ions) from         the { soil/ores} / plants         concentrate copper ions (1)</li> <li>plants (harvested and)         burned (to leave</li> </ul>	ignore plants absorb copper from solid metal ignore copper { atoms/metal/compounds} ignore plants heated	(2) AO 1 1
	copper/metal compound) (1)	mark independently	

Total for question 3 = 9 marks

Question Number	Answer	Mark
4(a)(i)	$2H_2(\mathbf{g}) + O_2(\mathbf{g}) \Rightarrow 2H_2O(\mathbf{g})$	(2) AO 3 1a AO 3 1b

Question Number	Answer	Additional guidance	Mark
4(a)(ii)	all <u>atoms</u> in the reactants are present in the product / only one product is formed	allow no atoms are wasted (in the reaction) / no waste products / nothing is wasted	(1) AO 1 1
		allow total mass of reactants = mass of useful products	
		allow complete calculation to show that atom economy is 100%	
		ignore equation is balanced / same number of atoms on both sides	

Question Number	Answer	Additional guidance	Mark
4(b)	final answer of 90 with or without working (4)	allow ECF throughout	(4)
	OR	458 seen (1)	AO 2 1
	total mass: 2x223 + 12 / (2 x 207) + 44 (= 458) (1) mass of useful products: 2 x 207 = 414	90.39 / 90.4 for 3 marks 110.628/ 111 (2) 110 (3)	
	414 (1) x 100 (1) (= 90.39) = 90 (1)	correct rounding of an answer with working to 2 sig fig (1)	

Question Number	Answer	Additional guidance	Mark
4(c)(i)	final answer of 65(%) with or without working (2)		(2)
	OR		AO 2 1
	<u>7.67</u> (= 0.65) (1) 11.80		
	$\frac{7.67}{1.67} \times 100 \ (=65(\%)) \ (1)$	allow any fraction x 100 (1)	
	11.80	153.84 scores 1	

Question Number	Answer	Additional guidance	Mark
4(c)(ii)	<ul><li>any two from</li><li>incomplete / reversible reactions</li></ul>	ignore	(2)
	<ul> <li>competing/unwanted/side reactions</li> </ul>	gases formed / impure substances / losses through incompetence / products not used up	AO 1 1
	practical losses during the experiment / loss on transfer from one piece of equipment to another		

Total for question 4 = 11 marks

Answer	Mark
<b>C</b> 30 2403	(1)
The only correct answer is C	AO 1 1
<b>A</b> is not correct because it will be a solid above 80 °C	
<b>B</b> is not correct because it will be a liquid at 20 °C and gas at 80 °C	
<b>D</b> is not correct because it will be a liquid at 20 °C and gas at 80 °C	
(	The only correct answer is C  A is not correct because it will be a solid above 80 °C  B is not correct because it will be a liquid at 20 °C and gas at 80 °C

Question Number	Answer	Additional guidance	Mark
5(b)(i)	An explanation linking		(2)
	<ul> <li>water { boils / evaporates} (to form steam / water vapour / leaving salt behind) (1)</li> </ul>	ignore sea water evaporates	AO 1 1
	<ul> <li>(steam / water vapour) condenses (to form pure water) (1)</li> </ul>	sea water evaporates and condenses scores 1 overall	
	allow alternative wording for evaporate and condense	mark independently	

Additional guidance	Mark
	(2)
er / ignore anti bumping granules / fractionating column water / h cold	AO 3 3b
allow alternative suitably described methods / prevent water vapour escaping / cools water vapour faster  ignore sea water vapours a closed system scores 0 overall  mark independently	

Question Number	Answer	Additional guidance	Mark
5(c)	An explanation linking  from B to C: graph flat because  • particles in solid use energy to { break out of lattice / break (intermolecular) bonds (between particles) / particles becoming randomly arranged /		(4) AO 3 2a AO 3 2b
	turn solid to liquid} (1) and any three from  from A to B: graph rises because • particles in solid in a lattice / fixed (mean) positions (1) • vibrate more (rapidly) (as temperature increases) (1)  from C to D:	may be shown as a diagram / on graph  may be shown as a diagram / on graph	
	<ul> <li>graph rises because</li> <li>particles in liquid move past one another / randomly (1)</li> <li>particles move more (rapidly) (as temperature increases) (1)</li> </ul>	ignore references to gas / evaporation / boil	

Total for question 5 = 9 marks

Question Number	Answer	Mark
6(a)(i)	C chlorine zinc	(1)
	The only correct answer is C	AO 2 1
	<b>A</b> is not correct because oxygen cannot be produced by the electrolysis of this molten salt	
	<b>B</b> is not correct because hydrogen cannot be produced by the electrolysis of this molten salt	
	<b>D</b> is not correct because hydrogen and oxygen cannot be produced by the electrolysis of this molten salt	

Question Number	Answer	Mark
6(a)(ii)	D it contains ions that can move	(1)
	The only correct answer is D	AO 1 1
	<b>A</b> is not correct because molten zinc chloride does not contain molecules	
	<b>B</b> is not correct because molten zinc chloride does not have a giant structure	
	C is not correct because delocalised electrons are not present	

Question Number	Answer	Additional guidance	Mark
6(b)(i)	A diagram of a workable apparatus showing a complete		(2)
	circuit including	max 1 if circuit not complete	AO 1 2
	<ul> <li>electrodes labelled in (copper sulfate) solution (1)</li> </ul>	allow labelling as 'electrodes' or 'anode' and 'cathode' or 'copper'	
		ignore 'connected to mains' allow symbol for cell/battery	
	<ul> <li>{ power supply / power pack / battery} connected (1)</li> </ul>	even if wrong way round	

Question Number	Answer	Additional guidance	Mark
6(b)(ii)	An explanation linking the following point to a maximum of	ignore references to zinc, chlorine	(4)
	four	and zinc chloride	AO 2 1
	anode lost copper and cathode gained copper / reaction at cathode is reverse of reaction at anode / copper ions move into solution at anode AND copper ions move out of solution at cathode (1) and any three from	allow copper atoms are oxidised (1)	
	<ul> <li>at anode copper atoms become copper ions (1) and lose two electrons (1) OR (at anode) Cu → Cu<sup>2+</sup> + 2e (2)</li> </ul>	marking points independently allow copper ions are reduced (1) marking points independently	
	<ul> <li>at cathode copper ions become copper atoms (1) and gain two electrons (1) OR (at cathode) Cu<sup>2+</sup> + 2e → Cu (2)</li> </ul>	penalise wrong use of atom / ion once only penalise wrong use of reduced / oxidised once only	

Question Number	Answer	Additional guidance	Mark
6(c)	$2H^+ + 2e^{(-)} \rightarrow H_2 / 2H^+ \rightarrow H_2 - 2e^{(-)}$ (2)	allow use of = or $\rightleftharpoons$ in place of $\rightarrow$ allow multiples	(2)
	, ,	reject h2 / h <sub>2</sub> / H2 / H <sup>2</sup>	AO 1 1
	species in correct place as shown above (1) balancing of correct species in correct place (1)		

Question Number	Answer	Mark
7(a)	<b>B</b> 750	(1)
	The only correct answer is B	AO 2 1
	<b>A</b> is not correct because 375.5 dm³ is half the actual volume formed	
	<b>C</b> is not correct because 1125.5 dm³is one and a half times the actual volume formed	
	<b>D</b> is not correct because 1500 dm <sup>3</sup> is double the actual volume formed	

Question Number	Answer	Additional guidance	Mark
7(b)	$\frac{1}{2} \times 750 (1) = 375 (dm^3)$	375 alone (1)	(1) AO 2 1

Question Number	Answer	Additional guidance	Mark
7(c)	final answer of 2 (kg) with or without working (3)	allow ECF throughout	(3)
	OR moles of $SO_2 = 750 (1) (=$	31.25 x 64 (2) allow ECF	AO 2 1
	31.25) 24	allow any calculated mass / 1000	
	mass of $SO_2 = \frac{750}{24} \times 64$ (1) (= 2000)	final answer 2000 (kg) (2)	
	mass of $SO_2 = \frac{2000}{1000}$ (1) (= 2 (kg))		

Question Number	Indica	ative content	Mark
7(d)	knowle	rs will be credited according to candidate's deployment of edge and understanding of the material in relation to the es and skills outlines in the generic mark scheme.	(6) AO 2 1
	not red releva	dicative content below is not prescriptive and candidates are quired to include all the material which is indicated as nt. Additional content included in the response must be fic and relevant.	AO 3 1a AO 3 1b
	<ul> <li>equilibrium reached faster because of higher temperature in set A / equilibrium reached slower because of lower temperature in set B</li> </ul>		
	_	her temperature means more frequent collisions because lecules have more energy / ORA for lower temperature in set	
	tak	crease in temperature increases equilibrium yield but system es longer to reach equilibrium aperature chosen for optimum conditions	
	• yiel	Id lower as forward reaction is exothermic h temperature favours back reaction which is endothermic	
	• equ	uilibrium reached faster because of higher pressure in set B / uilibrium reached slower because of lower pressure in set A	
		her pressure causes molecules to be closer together so more quent collisions / ORA for lower pressure in set A	
		ld higher because products occupy smaller volume than ctants for set B	
		alyst in set B causes equilibrium to be reached faster	
	• equ	alyst increases rate of both forward and back reactions ullibrium position not affected so catalyst does not affect yield	
Level	Mark	alyst reduces the need for the higher temperature  Descriptor	
Level	0	No rewardable material.	
Level 1	1–2	<ul> <li>Interpretation and evaluation of the information attempted build limited with a focus on mainly just one variable. Demonstrate synthesis of understanding. (AO3)</li> <li>The explanation attempts to link and apply knowledge and understanding of scientific ideas, flawed or simplistic connections.</li> </ul>	s limited
		made between elements in the context of the question. (AO2)	
Level 2	3–4	<ul> <li>Interpretation and evaluation of the information on both varial synthesising mostly relevant understanding. (AO3)</li> <li>The explanation is mostly supported through linkage and application knowledge and understanding of scientific ideas, some logical connections made between elements in the context of the que (AO2)</li> </ul>	lication of
Level 3	5-6	<ul> <li>Interpretation and evaluation of the information, demonstration throughout the skills of synthesising relevant understanding.</li> <li>The explanation is supported throughout by linkage and application knowledge and understanding of scientific ideas, logical connection made between elements in the context of the question. (AO2)</li> </ul>	(AO3) cation of ections

Question Number	Answer	Mark
8(a)(i)	B -78 -33 does not conduct	(1)
	The only correct answer is B	AO 2 1
	<b>A</b> is not correct because simple molecular, covalent substances do not have high mpt and bpt	
	C is not correct because ammonia is a gas at room temperature and does not conduct	
	<b>D</b> is not correct because simple molecular, covalent substances do not have these properties	

Question Number	Answer	Additional guidance	Mark
8(a)(ii)	$N_2 + 3H_2 \rightarrow 2NH_3$ (2)	accept multiples allow = or ≠ in place of →	(2)
	left hand side formulae (1) balancing of correct formulae (1)	ignore state symbols even if incorrect do not allow N2, n2, etc	AO 2 1

Question Number	Answer	Additional guidance	Mark
8(b)	(2)	double bond (1) rest of molecule (1) (dependent on correct double bond) ignore atomic symbol  allow all x or ● ignore inner shells of electrons even if incorrect	(2) AO 1 1

Question Number	Indica	tive content	Mark
8(c)*	knowle	rs will be credited according to candidate's deployment of edge and understanding of the material in relation to the es and skills outlines in the generic mark scheme.	(6) AO 1 1
	are not	dicative content below is not prescriptive and candidates trequired to include all the material which is indicated as at. Additional content included in the response must be fic and relevant.	
	bon • sha	Il structures the carbon atoms bonded by single covalent ds red pair of electrons ang bonds	
	<ul> <li>in d</li> <li>diar</li> <li>grap</li> <li>fulle</li> <li>in g</li> <li>in d</li> <li>mel</li> <li>nee</li> </ul>	liamond each carbon atom joined to four others mond has a giant covalent { structure/lattice} phene has a giant covalent { structure/lattice} erene has a molecular structure traphene and fullerene each carbon atom joined to three others liamond and graphene many bonds need to be broken to	
	<ul><li>less</li><li>fulle</li><li>bec</li><li>bon</li></ul>	ullerene weak forces between molecules senergy needed to separate molecules erene has the lowest melting / sublimation point ause diamond and graphene have lots of strong covalent des so both are very strong materials ause weak forces between fullerene molecules so its ength is very low	
	_	liamond there are no free electrons diamond does not conduct	
	elec	raphene and fullerene each carbon atom has one free ctron ce delocalised electrons phene conducts electricity	
	mol • no/	erene only conducts electricity across the surface of the lecule	
Larrat		ullerene is poor conductor of electricity ( / semi conductor)	
	Mark	Descriptor No rewardable meterial	
<del>                                     </del>	<u>0</u> 1–2	<ul> <li>No rewardable material.</li> <li>Demonstrates elements of chemical understanding, some of is inaccurate. Understanding of scientific ideas, enquiry, ted and procedures lacks detail. (AO1)</li> <li>Presents an explanation with some structure and coherence</li> </ul>	hniques
Level 2	3–4	Demonstrates chemical understanding, which is mostly rele but may include some inaccuracies. Understanding of scient ideas, enquiry, techniques and procedures is not fully detail	tific

		fully devolved. (AO1) • Presents an explanation that has a structure which is mostly clear, coherent and logical. (AO1)
Level 3	5-6	<ul> <li>Demonstrates accurate and relevant chemical understanding throughout. Understanding of the scientific ideas, enquiry, techniques and procedures is detailed and fully devolved. (AO1)</li> <li>Presents an explanation that has a well-developed structure which is clear, coherent and logical. (AO1)</li> </ul>

Total for question 8 = 11 marks

Question Number	Answer	Additional guidance	Mark
9(a)(i)	P R Q S (2)	two in correct order (1)	(2) AO 3 2a AO 3 2b

Question Number	Answer		Mark
9(a)(ii)	A workable diagram showing a method to measure the volume of the gas	if diagram is not workable (eg no bung at top of test tube), max 1 mark	(2) AO 3 3a AO 3 3b
	delivery tube between test- tube and (1)	allow connection shown as	
	<ul> <li>gas syringe / (graduated tube / inverted burette / measuring cylinder) over water bath (1)</li> </ul>	if collection vessel not labelled, graduations must be shown for the second mark	

Question Number	Answer	Additional guidance	Mark
9(b)	iron 10.00 = 0.179 / 0.18 / 0.2 and 56 copper 11.34 = 0.179 / 0.18 / 0.2 (1) 63.5 (ratio 1:1) so reaction A (1)	allow max 1 mark for Fe: 56 = 5.6 10.00 Cu: 63.5 = 5.6 11.34 so reaction A  other methods of calculation include 10.00 g Fe forms 10.00 x 63.5 (1) g copper  56 = 11.34 g copper so reaction A (1)  second mark dependent on first	AO 3 2a AO 3 2b

Question Number	Answer	Additional guidance	Mark
9(c)	$2AI + 6H^+ \rightarrow 2AI^{3+} + 3H_2 (2)$	Al and H <sub>2</sub> (1) balancing of correct species (1)	(2)
	_ ( )	allow multiples	AO 2 1

Question Number	Answer	Additional guidance	Mark
9(d)	pH { increases / goes up} by <u>one</u> / moves <u>1</u> closer to neutral	<pre>ignore { increases / goes up} alone</pre>	(1) AO 1 1

Question Number	Answer	Additional guidance	Mark
9(e)	1 mol of hydrogen atoms = a mass of 1.00 g = 6.02 x 10 <sup>23</sup> atoms	if 1 x 6.02 x 10 <sup>23</sup> is followed by atoms or particles, then award 1 <sup>st</sup> marking point	(3) AO 2 1
	6.02 x 10 <sup>23</sup> H atoms has mass = 1.00 g (1)	on answer line 3.32 x 10 <sup>-24</sup> (g) (2)	
	mass of 1 H atom = $\frac{1.00}{(1)}$ $6.02 \times 10^{23}$ = $1.66 \times 10^{-24}$ (g) (1)	ignore sig figs except for one	

Total for question 9 = 12 marks

Question Number	Answer	Mark
10(a)	from pink / red to orange / yellow	(1) AO 1 2

Question Number	Answer	Mark
10(b)	Any two linked explanations	(4)
	Any two suitable precautions to make use of pipette or burette as accurate as possible or to carry out the titration as accurate as possible (1) linked explanation (1)	AO 1 2
	e.g.	
	read bottom of the meniscus on the burette/pipette scale / read burette/pipette at eye-level (1) to obtain accurate volume of sodium hydroxide solution / sulfuric acid added (1)	
	add { solution from burette / alkali} one drop at a time near end point (1) to identify exactly when colour change of indicator takes place (1)	
	use a white tile (1) to make it easier to see exactly when colour change of indicator takes place (1)	
	make sure no air bubbles in burette or pipette when measuring volumes (1) so exact volumes are recorded (1)	
	continually swirl flask (1) to ensure complete mixing of acid with alkali (1)	
	wash inside of conical flask with a little deionised/distilled water (1) to wash reactants into reaction mixture (1)	
	wash burette / pipette with appropriate solution before titration (1) to ensure burette / pipette is not contaminated (1)	
	do not award marks for concordancy / reliability / changes of indicator	

Question Number	Answer	Mark
10(c)	0.097 (mol dm <sup>-3</sup> ) with or without working (4)	(4)
	OR moles of NaOH = $\frac{24.25 \times 0.200}{1000}$ (1) (= 4.85 x 10 <sup>-3</sup> ) $\frac{1000}{1000}$ from reaction equation moles acid = $\frac{1}{2}$ x moles alkali = $\frac{1}{2}$ x 4.85 x 10 <sup>-3</sup> (1) (= 2.425 x 10 <sup>-3</sup> ) concentration of H <sub>2</sub> SO <sub>4</sub> = $\frac{2.425 \times 10^{-3} \times 1000}{25.00}$ (1) $\frac{25.00}{1000}$ = 0.097 (1) (mol dm <sup>-3</sup> )	AO 3 2a AO 3 2b
	OR $1/2$ (1) x 24.25 x 0.200 = 25.00 x conc H <sub>2</sub> SO <sub>4</sub> (1) conc H <sub>2</sub> SO <sub>4</sub> = $1/2$ x $\frac{24.25 \times 0.200}{25.00}$ (1) $\frac{25.00}{0}$ = 0.097(1) (mol dm <sup>-3</sup> ) on answer line 0.388 / 0.39 (3) [ x2 instead of x1/2 ] $\frac{0.194}{0.19}$ (3) [not x1/2 ]	
	Ignore sig figs except for 1
