

Cambridge International Examinations

Cambridge International General Certificate of Secondary Education

CANDIDATE			
NAME			
CENTRE NUMBER		CANDIDATE NUMBER	
CHEMISTRY			0620/31
Paper 3 (Exten	ded)		May/June 2014
			1 hour 15 minutes
Candidates ans	swer on the Question Paper.		
No Additional M	Naterials are required.		

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

A copy of the Periodic Table is printed on page 16.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

The syllabus is approved for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

1 The table below gives the composition of six particles which are either atoms or ions.

particle number of protons		number of neutrons	number of electrons		
Α	33	40	33		
В	19	20	18		
С	34	45	36		
D 33		42	33		
E	13	14	13		
F	24	28	21		

(a)	vvnich particles are atoms? Explain your choice.	
(b)	Which particle is a negative ion and why has this particle got a negative charge?	
(c)	Which particles are positive ions?	
		[1]
(d)	Explain why particle A and particle D are isotopes.	
		[2]
	[Tota	ıl: 7]

2

(a)	Wa	ter is needed for industry and in the home.
	(i)	Rain water is collected in reservoirs. How is it treated before entering the water supply?
		[2]
	(ii)	State two industrial uses of water.
		[2]
((iii)	State two uses of water in the home.
		[1]
(b)		many regions, drinking water is obtained by the distillation of sea-water. Explain how illation separates the water from sea-water.
		[2]
		[Total: 7]

3

(a)	Diff	erent gases diffuse at different speeds.
	(i)	What is meant by the term diffusion?
	(ii)	What property of a gas molecule affects the speed at which it diffuses?
		[1]
(b)		ium is a gas used to fill balloons. It is present in the air in very small quantities. Diffusion car used to separate it from the air.
		at 1000°C is on one side of a porous barrier. The air which passes through the barrier has rger amount of helium in it.
	(i)	Why does the air on the other side of the barrier contain more helium?
		[1]
	(ii)	Why is it an advantage to have the air at a high temperature?
(c)		st helium is obtained from natural gas found in the USA. Natural gas contains methane and helium. One possible way to obtain the helium would be to burn the methane.
	(i)	Write an equation for the complete combustion of methane.
		[1]
	(ii)	Suggest why this would not be a suitable method to obtain the helium.
		[1]
(iii)	Suggest another method, other than diffusion, by which helium could be separated from the mixture of gases in natural gas.
		[1]
		[Total: 7]

- 4 In the Periodic Table, the elements are arranged in columns called Groups and in rows called Periods.
 - (a) (i) Complete the table for some of the elements in Period 3.

group number	I	II	III	IV	V	VI	VII
symbol	Na	Mg	Αl	Si	Р	S	Cl
number of valency electrons							
valency							

(ii)	[2] What is the relationship between the group number and the number of valency electrons?
	[1]
(iii)	Explain the relationship between the number of valency electrons and the valency for the elements Na to A <i>l</i> ,
	for the elements P to C1.
(b) Acr	oss a period, the elements change from metallic to non-metallic.
(i)	Describe how the type of oxide changes across this period.
	[2]
(ii)	Describe how the type of bonding in the chlorides formed by these elements changes across this period.
	[2]

[Total: 11]

BLANK PAGE

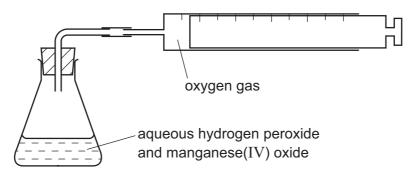

5

Zinc is obtained from the ore, zinc blende, ZnS.
(a) Describe the extraction of zinc from its ore, zinc blende. Include at least one balanced equation in your description.
[5]
(b) State two major uses of zinc.
[2]
[Total: 7]

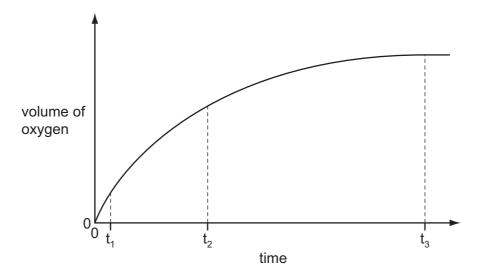

6 Hydrogen peroxide decomposes to form water and oxygen. This reaction is catalysed by manganese(IV) oxide.

$$2H_2O_2(aq) \rightarrow 2H_2O(I) + O_2(g)$$

The rate of this reaction can be investigated using the following apparatus.

 $40\,\mathrm{cm^3}$ of aqueous hydrogen peroxide was put in the flask and 0.1 g of small lumps of manganese(IV) oxide was added. The volume of oxygen collected was measured every 30 seconds. The results were plotted to give the graph shown below.

1	a١	/i\	How	do the	ratae	at times	ŧ	t s	and t	differ?
10	a)	(1)	HOW	uo ille	Tales	at tillies	ι,,	l ₂ c	มาเนเว	uillei :

(ii)

	[2]
Explain the trend in reaction rate that you described in (a)(i).	

.....

(b)		e experiment was repeated using 0.1 g of finely powdered manganese(IV) oxide. All the variables were kept the same.	ıe
	(i)	On the axes opposite, sketch the graph that would be expected.	2]
	(ii)	Explain the shape of this graph.	
		[2]
(c)		scribe how you could show that the catalyst, manganese(IV) oxide, was not used up in the ction. Manganese(IV) oxide is insoluble in water.	ıe
			٠,
(d)		the first experiment, the maximum volume of oxygen produced was 96 cm ³ measured b. Calculate the concentration of the aqueous hydrogen peroxide in mol/dm ³ .	at
		$2H_2O_2(aq) \rightarrow 2H_2O(I) + O_2(g)$	
	nur	mber of moles of O ₂ formed =	1]
	nur	mber of moles of H ₂ O ₂ in 40 cm ³ of solution =	1]
	cor	ncentration of the aqueous hydrogen peroxide in mol/dm3 =	
		[1]
		[Total: 1	5]

- 7 One way of establishing a reactivity series is by displacement reactions.
 - (a) A series of experiments was carried out using the metals lead, magnesium, zinc and silver. Each metal was added in turn to aqueous solutions of the metal nitrates.

The order of reactivity was found to be:

(i) Complete the table.

√ = reacts

x = does not react

	metal						
aqueous solution	lead Pb	magnesium Mg	zinc Zn	silver Ag			
lead(II) nitrate		✓	√	X			
magnesium nitrate							
zinc nitrate							
silver nitrate							

[3]

(ii) Displacement reactions are redox reactions.

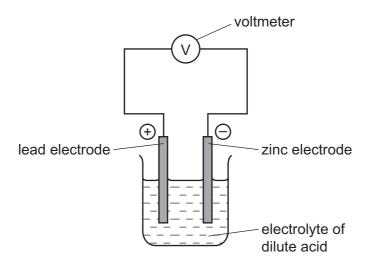

On the following equation, draw a **ring** around the reducing agent and an **arrow** to show the change which is oxidation.

$$Zn + Pb^{2+} \rightarrow Zn^{2+} + Pb$$
 [2]

(iii) Complete the following ionic equation.

$$Zn + 2Ag^{+} \rightarrow \dots + \dots$$
 [1]

(b) Another way of determining the order of reactivity of metals is by measuring the voltage and polarity of simple cells. The polarity of a cell is shown by which metal is the positive electrode and which metal is the negative electrode. An example of a simple cell is shown below.

(i)	Mark on the above diagram the direction of the electron flow.	[1]
(ii)	Explain, in terms of electron transfer, why the more reactive metal is always the negat electrode.	ive
		[2]

(iii) The following table gives the polarity of cells using the metals zinc, lead, copper and manganese.

cell	electrode 1	polarity	electrode 2	polarity	
Α	zinc	_	lead	+	
В	manganese	_	lead	+	
С	copper	+	lead	ı	

What information about the order of reactivity of these four metals can be deduced from the table?
[2]
What additional information is needed to establish the order of reactivity of these four metals using cells?
[1]

[Total: 12]

(iv)

- 8 Polymers are made by the polymerisation of simple molecules called monomers.
 - (a) (i) The structural formula of a polymer is given below.

This polymer is made by addition polymerisation. Draw the structural formula of its monomer.

[1]

(ii) The two monomers shown below form a nylon which is a condensation polymer.

Draw its structural formula showing one repeat unit of the polymer.

[3]

(iii) Name the natural macromolecule which contains the same linkage as nylon.

.....[1]

(iv) Explain the difference between addition polymerisation and condensation polymerisation.

.....[2]

(b)	Ma	ny polymers are non-biodegradable.
	(i)	Explain the term <i>non-biodegradable</i> .
		[2]
	(ii)	State three problems caused by the disposal of non-biodegradable polymers.
		[3]
(c)		rage tanks for cold water are now made from polymers because they are cheaper than tal tanks. Suggest two other advantages of making cold water tanks from polymers.
		ro1
		[2]
		[Total: 14]
